Sutures from surgery are absorbable. No need to return to clinic to have them removed.

Your cat's incision site has been **tattooed** for easy identification of spayed cats in the future. It is normal for the incision site to appear green or black.

Sutures from surgery are absorbable. No need to return to clinic to have them removed.

Your cat's **incision** site has been **tattooed** for easy identification of spayed cats in the future. It is normal for the incision site to appear green or black.

Sutures from surgery are absorbable. No need to return to clinic to have them removed.

Your cat's **incision** site has been **tattooed** for easy identification of spayed cats in the future. It is normal for the incision site to appear green or black.

Estrus - Your cat is in heat! Absolutely no access to male cats for the next 2 weeks while she heals from her surgery! They will still try to mate with her and this can lead to severe complications.
